

A culture of confidentiality

Achieve peace of mind as you prepare to bring your pharmaceutical product to market with a partner dedicated to protecting your Intellectual Property (IP) with a robust CARE system in place.

C

Controlled: Your confidential information is stored in a controlled, isolated and secure location.

A

Agreements: We work with you to develop robust and customized confidential agreements that specifically address the protection of your IP.

R

Rules: Our company policies and corporate guidance documents outline the rules we follow to safeguard your IP.

E

Education: Our colleagues are regularly trained to ensure the highest regulatory standards are met when working with your IP.

Protecting your IP is at the core of what we do

We place strict controls on who can access your data, operating on a “need-to-know” principle. This ensures that access to this information is limited to only those employees and contractors whose job functions directly require it.

Robust development processes

You can rest assured that there is no risk of crossover – your molecule’s production process remains completely separate from where our molecules are created or discussed.

Ready to secure your IP?

Discover an altogether different approach to protecting your IP with a strategic partner dedicated to helping you deliver medicines that change patients’ lives.

Protection across the manufacturing floor

At every stage of the manufacturing journey, we take measures to ensure your IP remains secure by putting robust processes in place:

We conceal your project identity

By assigning a unique project code to your project, we conceal the nature of your project and use this code across your batch records to manufacture your product effectively.

Operators never see the full process

Each operator only handles one or two of the manufacturing steps involved in your product, ensuring nobody has access to the full process but you.

Securing your sensitive data

Our robust security measures help to keep your sensitive data safe and protected.

Physical security

Physical documents and materials that contain trade secrets are secured in locked file cabinets, safes, or restricted access areas.

Digital security

Our robust cybersecurity measures include encryption, access controls, firewalls, and intrusion detection systems to protect your digital operations.

Network monitoring

We continuously monitor your network for any unusual or suspicious activities that may indicate a breach and are ready to take early action to help mitigate potential damage.

Backed by Pfizer’s experts and resources, we’re ready to help you on your journey to market with total peace of mind. **Get in touch to get started.**
