

Bio-logic brilliance mAbs designed with logic and delivered with care from Sanford, North Carolina

Brought to you by a leading CDMO, powered by Pfizer

We're dedicated to assisting you every step of the way in your monoclonal antibody (mAb) journey with reliable execution and delivery to bring your biologic to patients sooner because time is life.

With a 35+ year legacy, our specialized manufacturing site in Sanford, NC, is dedicated to the brilliance of your biologic.

Harnessing expertise in both adherent and suspension cell culture processes and industry-leading yield and productivity, Sanford has the support of a global network and specialist capabilities.

Capabilities

- Tech transfer with scale-up from pilot to commercial
- Upstream and downstream process optimization capabilities
- Single-use mobile equipment
- Clinical to commercial manufacturing
- Biosafety levels 1 and 2
- Cold-chain handling and warehousing

Scalability and quality

- Industry-leading yield and productivity ratios with cell culture scale up to 2K liters
- Drug product capabilities up to 20 liter batches
- A significant number of Good Manufacturing Practice (GMP) batches and proven quality control

Expertise

- A team of 50+ experienced scientists and decades of experience in the biologics space
- A wealth of experience in the development and scale-up of antibody and protein technologies
- Extensive testing experience, bioassays and protein-specific techniques
- Partnering with customers to enable seamless integration across the entire lifecycle of your molecule

End-to-end drug substance to drug product manufacturing capability with single-use technology

Discover how we can help accelerate your mAb's journey to market **with reliability and quality**
